## SoleraTec's Phoenix RSM Video Surveillance Management Software Now Certified On HP StoreEver LTO Libraries

*HP's disk and LTO tape storage products deliver an efficient  
multi-tiered video storage solution.*

San Diego, CA – September 16, 2015 – SoleraTec LLC, provider of innovative video lifecycle management and storage products, has certified PHOENIX RSM video surveillance management software on the HP family of StoreEver LTO data tape storage libraries. These models include the [HP StoreEver ESL G3 library](#), the [HP StoreEver MSL G3 Family of libraries](#), and the [HP StoreEver MSL6480 tape library](#) each with LTO-5 and LTO-6 drives.

Working with the HP StoreEver LTO library certification team, SoleraTec has been able to install, configure, and thoroughly test the PHOENIX RSM software on the previously mentioned HP StoreEver LTO libraries with excellent results.

The HP server, disk, and LTO tape storage solution is a compelling hardware platform for the video surveillance market capable of significant operational expenses savings, energy savings, and affordable storage of online, near-line, and offline video surveillance feeds. HP –powered by the Phoenix RSM surveillance management software– can now offer a new level of video retention and archive management.

Together, the Phoenix RSM and HP StoreEver product family delivers a robust solution to organizations that need greater storage, overarching management, and longer retention of their video surveillance. The product combination enhances the capability to quickly search and playback video feeds regardless of when the video was recorded or where it is stored. The complete video retention solution offers users an unparalleled ability to capture and store vast amounts of video surveillance footage for search, playback, and export.

Add in the increased adaptation of body worn cameras and the amount of video feeds and the associated retention periods of those cameras, and the storage required, become extremely large, extremely fast.

Along with the industry's widest support for over 325 IP-cameras manufacturers, the Phoenix RSM and HP storage products can record the motion detection levels from supported cameras and deliver far more relevant search and play back capabilities.

"Having the right tool for the right job that scales as your business grows is critical in today's competitive climate. HP's family of StoreEver LTO storage libraries provide the right mix of scalability and affordability," stated Mark Armstrong, CEO of SoleraTec. "With the ability to simply install additional HP StoreEver LTO libraries to extend the retention and archiving periods, the ease of use and overall management of this HP-oriented solution is clearly first-class."

Organizations that need a cost-effective integrated and professional video surveillance solution can look to SoleraTec's PHOENIX RSM, integrated with HP's server and storage product line. When businesses need to capture evidentiary quality video around the clock, this reliable and comprehensive video surveillance solution provides affordable real-time video monitoring and simultaneous recording for a larger number of surveillance cameras.

"With advances in video surveillance camera technology and companies' recognition of the overall value of recorded video, retention periods have skyrocketed in recent years," said Chris Powers, Vice President Data Center Development, HP Storage. "The HP and SoleraTec solution delivers a robust multi-tiered storage approach which provides HP customers with a scalable, flexible, end-to-end solution that does not become cost prohibitive as video retention requirements increase."

Correctional facilities, airports, hospitals, and critical infrastructure facilities are just some of the organizations that rely upon always-on video surveillance infrastructure. With SoleraTec's PHOENIX RSM on HP server and storage equipment, operators can have the peace of mind that their systems are always on guard.

### **About SoleraTec**

SoleraTec is a leading developer of archive, storage, and video lifecycle management products. SoleraTec leverages a heritage of more than 15 years to deliver quality, innovation, and technological advancement that have established the company as one of the premier data protection solution providers in the industry. SoleraTec works through OEMs, dealers, and system integrators to deliver complete video asset protection solutions. The company was established in 1997 by a team of industry veterans with experience deploying data protection, HSM, and storage lifecycle management solutions to some of the largest companies around the world.
